The University of Chicago Press

Senescence and Rejuvenescence. By Charles Manning Child,
Associate Professor of Zoölogy in the University of Chicago.

xii+482 pages, 8vo, cloth; \$4.00, postage extra (weight 3 lbs.)

The author of this volume, after some fifteen years of experimental investigation of the nature and origin of the organic individual, has established certain facts which afford a more adequate foundation for the general consideration and interpretation of the age changes in the organic world than we have hitherto possessed.

Certain experimental methods have made it possible, not only to follow the physiological age changes in some of the lower animals, but to learn something of their nature. The most important result of the investigation is the demonstration of the occurrence of rejuvenescence quite independently of sexual reproduction. The book differs from most previous studies of senescence in that it attempts to show that in the organic world in general rejuvenescence is just as fundamental and important a process as senescence.

The Modern Study of Literature. By Richard Green Moulton,
Head of the Department of General Literature in the University of Chicago.

vi+542 pages, 12mo, cloth; \$2.50, postage extra (weight 1 lb. 13 oz.)

An introduction to literary theory and interpretation by the Head of the Department of General Literature in the University of Chicago. The purpose of this work is to discuss the Study of Literature: what it must become if it is to maintain its place in the foremost ranks of modern studies. The author's previous well-known books on literary criticism and his long and successful experience in the public presentation of literature have especially fitted him for the authoritative discussion of this great problem of modern education.

A Short History of Japan. By Ernest Wilson Clement.

x+190 pages, 12mo, cloth; \$1.00, postage extra (weight 15 oz.)

Because of the intense interest in the present political situation in the Far East this short history of Japan will make a strong appeal to readers and travelers who are asking for a better knowledge of the background of the struggle for supremacy in the Orient.

The author, Ernest Wilson Clement, whose long residence in Japan as a teacher, interpreter for the United States legation, correspondent, and editor has given him a wide familiarity with the country, has written a brief but discriminating account of both Old and New Japan; and for the many readers who do not care to go into the details of Japanese history the book will be found a highly interesting epitome of what has happened during the long course of Japanese development. As frequent references are made to fuller accounts, the book may well serve as an introduction to further study of the country and its institutions.

Current Economic Problems. By Walton Hale Hamilton, Professor of Political Economy in Amherst College.

xl+790 pages, 8vo, cloth; \$2.75, postage extra (weight 3 lbs. 1 oz.)

The work is intended for the use of students in elementary economics and is designed particularly to meet the needs of those who, having had a thorough course in economic theory, need a general introduction to current economic problems. It will be found especially useful in colleges and universities which give in the first semester a course in applied problems. The plan of the book is strictly in line with the prevailing tendency in the teaching of economics. It consists of readings selected from journals, books, and other sources; and these excerpts, presenting as they do different points of view, form an admirable basis for classroom discussion.

First-Year Mathematics for Secondary Schools. By Ernst R. Breslich, Head of the Department of Mathematics in the University of Chicago High School.

xxiv+344 pages, 12mo, cloth; \$1.00, postage extra (weight 1 lb. 10 oz.)

Correlation in high-school mathematics, as well as in other branches of study, is rapidly gaining recognition, and promises

to be the universal method of the future. This text in correlated secondary mathematics was first published several years ago. It is the first-year text in a course which developed as a result of a successful series of experiments in the fusion method of teaching high-school arithmetic, algebra, and geometry, carried on in the University of Chicago High School. Numerous schools throughout the country have since taken up the system. In addition to a complete revision of the text matter, historical notes have been added, with portraits and biographies of mathematicians.

University of Chicago Sermons. By Members of the University Faculties.

xii+348 pages, 12mo, cloth; \$1.50, postage extra (weight 1 lb. 6 oz.)

This book contains eighteen sermons delivered by as many leading men from the faculties of the University of Chicago. In each sermon appears the best thought of a well-known scholar on a particular phase of religious life. The contributors include not only representatives of the biblical and theological departments of the University, but also members of the departments of education, sociology, and philosophy—a combination of modern scholarship and pulpit power that makes a volume of religious inspiration for both minister and layman. The names of the contributors to the volume are as follows: Theodore Gerald Soares, Charles Richmond Henderson, Ernest DeWitt Burton, Shailer Mathews, John Merlin Powis Smith, James Hayden Tufts, Allan Hoben, Errett Gates, Shirley Jackson Case, Edward Scribner Ames, Albion Woodbury Small, Benjamin Allen Greene, Nathaniel Butler, Gerald Birney Smith, Fred Merrifield, and George Burman Foster.

Lives Worth Living. By Emily Clough Peabody.

202 pages, 12mo, cloth; \$1.00, postage extra (weight 1 lb. 4 oz.)

A course containing twelve studies for young women. Six of these studies present the lives of women from the Bible and Christian history, representing the varied sphere of women in the home,

THE UNIVERSITY OF CHICAGO PRESS

the social circle, public life, the business world, religious world, and the professions. Each character study is followed by a chapter devoted to the discussion of women in the same sphere today. The course was successfully developed with a class of young women, and is interesting, inspiring, and practical. A good bibliography is provided.

The School and Society. (Second edition, revised and enlarged.)
By John Dewey, Professor of Philosophy in Columbia University.

xvi+164 pages, 12mo, cloth; \$1.00, postage extra (weight 15 oz.)

Teachers and others concerned with education will be interested to know that *The School and Society* has been revised and much enlarged. The position of authority on educational subjects which the author holds and the popularity which the former edition enjoyed are indications of the value of this work. About seventy-five pages of educational contributions from the pen of Dr. Dewey have been added, making a book which consists of eight chapters, as follows: "The School and Social Progress," "The School and the Life of the Child," "Waste in Education," "The Psychology of Elementary Education," "Froebel's Educational Principles," "The Psychology of Occupations," "The Development of Attention," "The Aim of History in Elementary Education."

Corrosion-Resisting

Put a piece of metal in acid, and
see the tiny bubbles stream up-
ward. That's corrosion you can see.

Dip an ordinary pen in ink (ink contains acid)
and the same thing takes place, only so gradu-
ally that you can't see it.

The corrosion-resisting metal of all Esterbrook
Pens is the result of 50 years' exhaustive metal-
lurgical and chemical research.

Esterbrook Pens *last*.

If you like a smooth, easy-writing pen that
makes a fine quick-drying line, try this Ester-
brook Inflexible No. 322.

Send 10c For useful metal box containing
this and eleven other most popular
pens, including the famous 048 Falcon.

**A Mazda Lamp Equaling
the 35-Ampere Arc for Pro-
jection of Opaque Objects**

The newly developed, 1000-watt gas-filled *Mazda Lamp* mounted with an optical corrected reflecting mirror in our new Combined Balopticon permits opaque objects to be projected with a brilliancy exceeding that of the 35-ampere, alternating current, arc lamp. Yet it consumes only 9 amperes and requires no rheostat. This Balopticon projects opaque objects (projected areas, 6×6 inches) and lantern slides, with instant interchange between the two forms.

NEW COMBINED BALOPTICON

The Mazda Lamp is absolutely automatic—hence, simple in operation—and very economical.
